

Money that *lives* in your texts.

Every country gets its own Mate number. Text it and a wallet is created for you — then send to any phone number on earth, receive from anywhere, all inside iMessage, RCS and WhatsApp. No app required to get started.

25+

local stablecoins live on Base

ACCESS

A coin with no corridor is just *a local currency again.*

Coinbase and Base are putting the whole financial system onchain — every currency, open to anyone. Being onchain isn't the same as being reachable. Access is the missing half, and messaging is where every family and every friend already is.

- 01 Every currency is going onchain — 25+ local stablecoins on Base today, targeting every global currency by 2027.
- 02 Onchain is not reachable — a rupiah coin in a contract is invisible to the sender in California.
- 03 Any coin, any country — send home, pay a friend, get paid, without knowing which chain or which app.
- 04 Messaging is where everyone is — every family, every friend, already in a thread. That's why we build there.

THE NETWORK

CONNECT IN

Stablecoin issuers

USDC · IDRX · XSGD · PHPC · JPYC

On/off-ramps

Hold the licences and local banking

MATE · THE NETWORK LAYER

Number layer

In-country numbers via Photon, one per market

Account layer

One Mate Account per phone number — sends and receives land as text

Routing layer

Settlement and auto-swap on Base; the licensed ramp does the regulated leg

REACH

iMessage · RCS

Live today. WhatsApp next.

Any number on earth

The recipient installs nothing

FIVE NODES · APAC FIRST

US live · Asia next — five markets is Photon's minimum for international numbers

Raising a *\$1M seed* to light up the first five nodes.

Revenue comes from the issuers and ramps who want the messaging layer — subscription per market, conversion into local stablecoins, and yield on balances.
