

Money that lives in your *texts*.

Send across borders. Earn. Trade. Save. All in the app you already have open.

iMessage is the world's largest *unbanked* network.

1.3 billion users — with no way to send, earn, or grow money without leaving the app. That gap is the opportunity.

1.3B

IMESSAGE USERS · APPLE 2024

\$800B+

SENT ACROSS BORDERS EVERY YEAR

~6%

AVG. FEE TO SEND MONEY HOME TODAY

Sending money home is still *broken*.

A worker in the US sends \$200 to family abroad. Today that's a 6% fee, a 3-day wait, a new app, a KYC wall, and a branch pickup. **\$48 billion a year evaporates in fees** on money that's already been earned.

WHAT IT COSTS TODAY

up to 6% in fees

1–3 days to arrive

download a new app

create an account · pass KYC

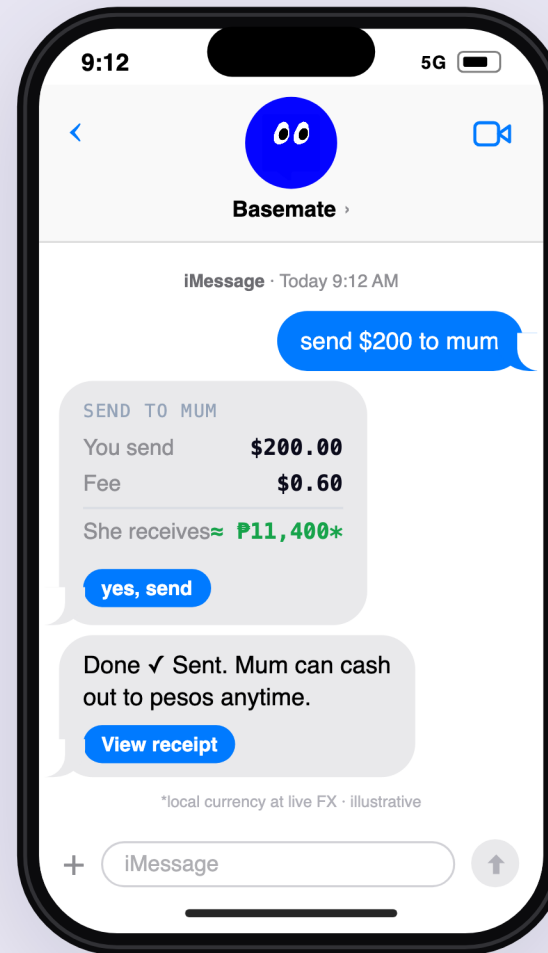

find a branch to pick up

WHAT IT SHOULD BE

A *text*.

Send money home in a *text*.

“Send \$200 to Mum.” She gets it in seconds — in her country — and cashes out to local currency. No app for her to download. No account to make. **If she can text, she can get paid.**

One agent. Four *jobs*.

Send · Earn · Trade · Save. Cross-border send is the front door — once your money's in, Basemate does the other three.

S

Send

Money to anyone with a phone number, across any border, in a text.

E

Earn

Idle USDC earns live on-chain yield (~5%), automatically.

T

Trade

Tokenized equities — opened to regions and people long shut out. Equitable access, in a text.

S

Save

USDC as your base currency — stable, growing, dollar-denominated anywhere.

Built on the rails remittances *actually run on.*

Every incumbent makes the recipient do the work — download an app, verify ID, find a pickup point. We flipped it. The sender uses iMessage. The recipient just gets a text — no app to install, ever.

THE SENDER SIDE · IMESSAGE

Where the money comes from

1.3B users across the US, EU, and Gulf — the world's remittance senders.

THE RECIPIENT · ANY PHONE

Where the money goes

A text with a link lands anywhere — Mexico, India, Nigeria, the Philippines, Brazil — and cashes out to local currency.

THE UNLOCK

Zero apps for the recipient

No account, no crypto knowledge. A text arrives. The money's there.

Zero app. Zero seed phrase. Zero *account*.

Fund with Apple Pay, card, or bank — no Coinbase login, no MetaMask, no wallet to set up. USDC lands in your agent wallet in seconds. The magic isn't "never touching the web" — it's never having to download an app or open a CEX account.

01 Tap to fund

Apple Pay, debit, or bank — one tap, any amount.

02 Provider-agnostic rails

Onramp routes through best-available — Coinbase today; Stripe, MoonPay, Ramp ready. Never a single point of failure.

03 Zero friction for normies

If you have a phone, you're in.

Three things just *aligned*.

01 Stablecoin clarity

The GENIUS Act passed in 2026. Dollar stablecoin payments are legally simple.

02 Base is the rails

Coinbase's L2 — institutional-grade, sub-cent fees, 100M+ verified Coinbase users upstream.

03 The remittance moment

Stablecoins already move billions across borders. The missing piece was a front door normal people already have open. That's the text app.

We make money when your money *moves*.

Incumbents charge ~6% to send money home. We take a fraction of that — and still run a high-margin, multi-line business.

The flywheel: send → fund → idle USDC earns → *we share the yield*.

Every dollar that lands stays and compounds.

FLAGSHIP

Remittance take rate

~1–2% on cross-border send — a third of what Wise/Western Union charge, on an \$800B/yr market.

RECURRING

Yield rev-share

A cut of the APY on USDC parked in Moonwell / Morpho / Aave — scales with balances, not just transactions.

POWER USERS

Base App upside

Perps (Avantis) and token-launch fees (Bankr) on the power-user side.

Real users. Real *money*.

Launched May 27, 2026. Live on Base App and iMessage beta.
